GitHub

PROFESSIONAL PROFILE

I am a Systems Engineer with experience in both backend development using .NET and mobile/web development using Flutter. I have participated in the creation of robust, scalable, and secure solutions, applying modern architectures such as microservices, hexagonal architecture, and Clean Architecture. I am proficient in tools such as Azure and Azure DevOps, and have solid knowledge of secure authentication, relational databases, and NoSQL. I stand out for implementing modern interfaces with Atomic Design, managing advanced state with Riverpod, and efficiently consuming RESTful APIs. I consider myself proactive, self-taught, and focused on continuous improvement, code quality, and delivering a high-quality user experience.

EDUCATION

B.Sc. in Systems Engineering – Universidad Popular del Cesar Expected Graduation: 2025 (Thesis pending)

PROFESSIONAL EXPERIENCE

Backend Developer *Inteia | January 2024 – February 2025*

Key Projects: Appimotion and Traffig

- Appimotion: Developed sustainable mobility solutions through .NET APIs based on a microservices architecture, using Cosmos DB as the database. Solutions were containerized with Docker and deployed to AKS.
- Traffig: Built real-time traffic management system APIs in .NET using a microservices architecture and Cosmos DB. Designed and deployed APIs containerized with Docker and supported deployment to AKS.

In all projects, I implemented secure storage using Azure Blob Storage, secret management with Azure Key Vault, and user authentication with Azure Entra ID. I contributed to CI/CD pipeline deployments, used Docker for containerization, and ensured code quality with SonarQube. I followed Clean Architecture, SOLID principles, and Scrum methodology.

Mobile Developer *Inteia | January 2024 – February 2025*

Key Projects: Appimotion and SIGMINT

Participated as a mobile developer leading the design and development of user interfaces and functionalities in **Flutter** for mobility and real-time traffic management solutions. The applications were built to perform in demanding environments, ensuring high performance, scalability, and an optimized user experience.

PROFESSIONAL SKILLS

- Development of scalable RESTful APIs with .NET
- Implementation of hexagonal architecture
- Process automation with Hangfire
- Performance and response time optimization
- Secure authentication management
- Strong commitment to continuous improvement and value delivery
- Development of mobile and web applications with Flutter
- Implementation of Atomic Design
- Advanced state management with Riverpod
- Efficient and secure consumption of RESTful APIs
- Clear and effective communication in technical environments
- Problem-solving in development and execution
